Upcoming change to GitHub App installation token format

GitHub App installation tokens will soon use a new stateless format (ghs_...) and may be longer (~520 characters). Apps with hardcoded length assumptions may break. Validate your apps and workflows with the per-request override header detailed in this [GitHub Changelog](#).

---

This template provides a minimal setup to get React working in Vite with HMR and some Oxlint rules.

Currently, two official plugins are available:

- [vitejs/plugin-react](https://github.com/vitejs/vite-plugin-react/blob/main/packages/plugin-react) uses [Oxc](https://oxc.rs)
- [vitejs/plugin-react-swc](https://github.com/vitejs/vite-plugin-react/blob/main/packages/plugin-react-swc) uses [SWC](https://swc.rs/)

```
